Abstract. Any increase of an energy potential is a survival, independence and prosperity of each nation (community) in the system of chaotic globalization, but the Mantra of global cooperation not always is the Mantra of the separate nation. India uses all possibilities for reception of additional energy sources. It has been widely shown at the last conference and exhibition “Petrotech-2009”. India assumes to increase power consumption to 400 000 MW in 2030 against 130 000 MW in 2008 at the expense of all sources. The great attention is given to renewed and alternative sources.

Keywords: oil, gas, energy, alternative sources, India, Russia.
